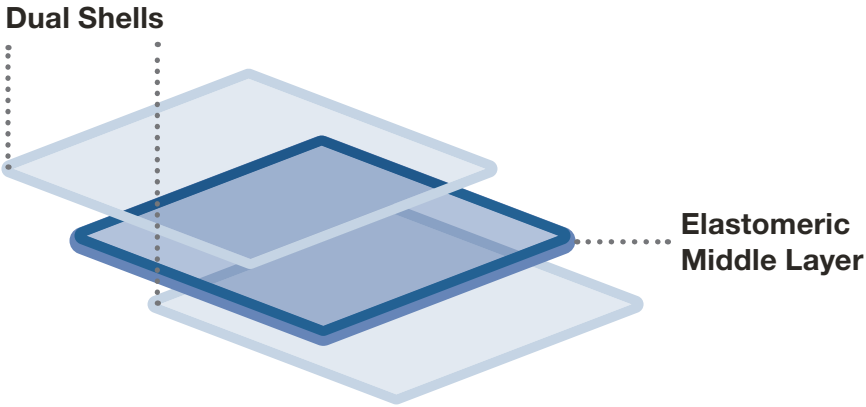
ADVANCED ENGINEERING

- Argen Clear Aligners are made from a premium thermoformed plastic material that is engineered for **precise fit, ongoing force retention, and exceptional durability.**
- **Premium Material** – continual force for faster treatment and greater comfort for your patient.
- **Improved Stain Resistance** – starts clear, stays clear.

MKT-18431-Ver1-06/20

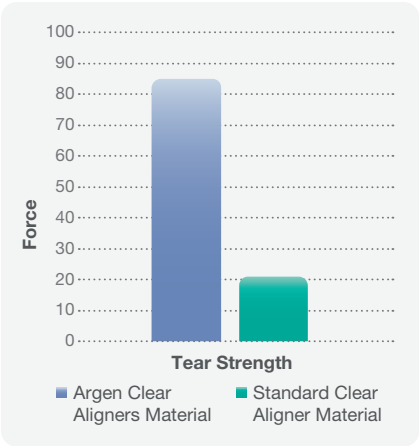
Argen Clear Aligners use an elastomeric layer encased in a dual shell construction that provides a consistent, continual force for your patient's comfort.

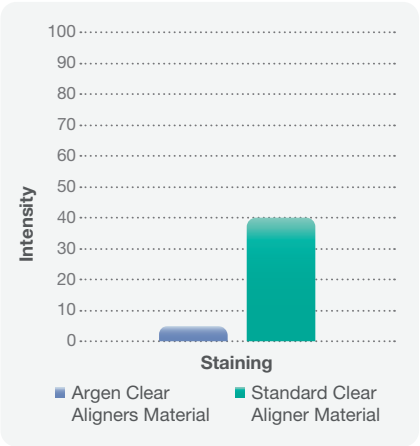


The consistent pressure produced by the dual-shell construction accurately moves teeth over the prescribed period of time.

TEAR STRENGTH & STAIN RESISTANCE

This material has superior ability to resist tearing and staining after an extended period in the oral cavity.





SIMPLE AND STREAMLINED **CASE MANAGEMENT**

- Easy to order
- Easy to track
- Treatment review and case modification process
- Support at every stage
- Fast turn-around time

MKT-18431-Ver1-06/20

1 Initiation

Scan data is entered
into the system

2 Case Acceptance

Lab accepts case
from doctor

3 Design*

Case is submitted for
design / treatment plan.

4 Approval

Doctor approves
treatment plan

5 Manufacturing

Argen manufactures
the clear aligners.

6 Delivery

Lab receives Argen Clear Aligner
package for delivery to doctor

*Design is provided by an independant design center.

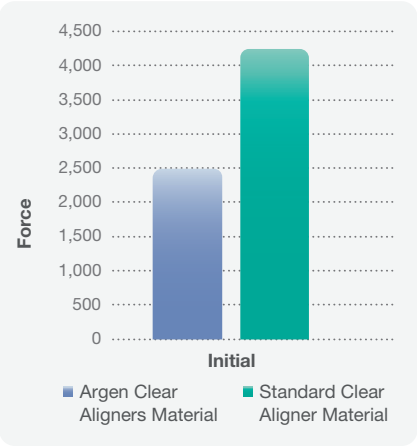
MKT-18431-Ver1-06/20

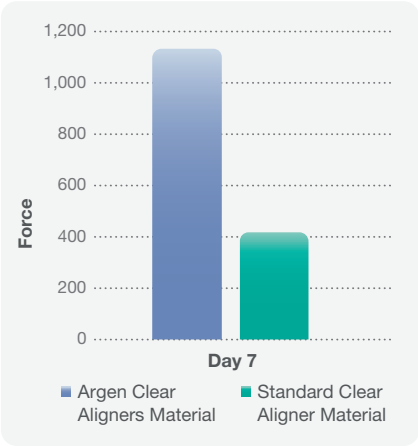
TREATMENT OPTIONS

On-going force retention provides greater tooth movement over time.

TOOTH MOVEMENT FORCE AT 98.6º F

Initial vs. Day 7





MKT-18431-Ver1-06/20

Perfect for **Esthetic Cases**

- Anterior and premolar movements
- No molar movements or band treatment
